Tutorials related to Photoshop Beginners Adobe Photoshop CS5 is a powerful image-editing program used for virtually anything you can imagine, including retouching images, working with layers, color management, filters, and adding special effects, such as drop shadows, bevels, and many more. If you're new to Photoshop, or don't know where to start, there are lots of tutorials to get you up and running with Photoshop. Here are just a few of the best ones. Keyboard Shortcuts In this tutorial, you'll work on editing and retouching an image, and it covers basic Photoshop skills from layers to text. It's got a lot of shortcuts, and if you're new to the program, this tutorial will give you the basics.

The tutorial will teach you how to crop, manipulate and correct color, enhance various tones, and how to convert an image to black and white. For more advanced users, this tutorial will show you how to create shapes, apply filters, use brushes and even mask images. The tutorial will also teach you how to adjust layers and create a basic composition. Some of the shortcuts, such as the "Get Started With..." Shortcut, are standard across all Adobe Photoshop tutorials. Others only apply to certain tutorials. If you're new to Photoshop, don't worry about getting confused; the shortcuts are generally explained before they're used in the tutorial. Get Started With Photoshop CS5 Learn about the Photoshop interface and the basics of the program. This tutorial will help you use the tools and features in Photoshop to accomplish basic tasks. It will show you how to perform four common tasks: image editing, image retouching, adjusting color, and applying black-and-white tones. Advertisement

Filter Effects In this Photoshop tutorial, you'll learn the basics of the Photoshop filters and how to apply them to images. With the help of your mouse, you'll learn the basics of adjustment layers, layer effects, painting with brushes, and creating and using adjustment layers. After you've mastered these basics, you'll learn how to use the different filters and apply them to images. You'll also learn how to adjust the filters, the layer effects, and add effects in the Layers panel, and how to control the filters with the Gradient tool. Subscription Versions Subscription-based versions of Photoshop are split into two groups; Photoshop Lightroom and Photoshop Creative Cloud. The image editing software is bundled with a subscription to one of the paid services, either the creative cloud or the Lightroom cloud. These subscription-based tools are less expensive than standalone Photoshop licenses. However, the subscription model may charge high yearly fees as a cost per image. In a constant state of flux, subscription licenses could be canceled by Adobe. New features may be discontinued, or old features changed or removed. Additionally, these services may get significantly more expensive at a later date. Adobe Photoshop Subscription Pricing Subscription-based subscriptions start at \$9.99 per month for the creative cloud. The creation cloud subscription option is the best choice if you need the software's core features, but the subscription is still less expensive than a standalone license. Subscriptions

also come with a 30-day trial. Adobe Photoshop Elements Subscription Pricing Photoshop Elements has a subscription-based option too, and it's a good deal at \$6.99 per month. Photoshop Elements is a cleaner and simpler version of Photoshop's technology. The subscription program is an excellent choice for photographers, for web designers, and for creatives looking to update or add to their Photoshop arsenal. However, the price is less than half of the creative cloud's initial pricing and Photoshop Elements has fewer features. Subscriptions come with a 30-day trial. You can download Adobe's professional software from Adobetape for \$49.00. The perpetual license is one that allows you to install the software on multiple computers. You can make full use of this program and test out new features. The included software is only the premium part; the full price of Adobe Photoshop is \$119.00 for the complete suite. Ad 388ed7b0c7

Frogging with a twist: where will this year's crop lead the Modern Frogger? Photo by Ward Hill As this year's Frogger Classic comes to a close, our friends at Cortex have been taking a look back at recent history to get a glimpse into the future for Australia's largest arcade bar. For those of you who want to read more about it, we have a full feature on CortEX coming soon, so keep your eyes on the site. In the meantime, we've made the entire experience and the accompanying article available below for your easy viewing pleasure.

The ionic localization of the calcium ion in ferredoxin-NADP-oxidoreductase; freeze-fracture study of the enzyme treated with calcium fluoride. The localization of Ca^{2+} in ferredoxin-NADP-oxidoreductase, a membrane enzyme of the chloroplast of cyanobacteria (a photosynthetic bacterium), was studied by using freeze-fracture techniques. Freeze-fractured specimens of the membranes were prepared from enzyme-depleted membranes and reaction products. In the control membrane, the two barbed faces (electron-lucent) of the thylakoid membrane were enriched with protein. Ca^{2+} enhanced the dense-face/light-face ratio of the protein particle distribution by partially destroying the reactive sites in the protein molecule, and induced a lateral alignment of the protein particles and the protein matrix. The destruction of the reactive sites may prevent the interaction of the protein molecules, enabling the formation of ordered protein aggregates. Further, the increase in the number of calcium ions may stabilize the aggregate.

Pharmacological interactions of tetramisole and ethanol. In this work the action of tetramisole on the loss of righting reflex induced by ethanol (1.0 g/kg IP) was studied in mice. When both drugs were administered in association there was a statistically significant increase in the time needed to the development of the effect of ethanol and the mean lethal dose (LD50) was considerably decreased. Furthermore, when mice received ethanol (1.0 g/kg IP) 30 min after tetramisole (0.2 mg/kg IP), the loss of righting reflex was delayed. The influence of the interaction between the two drugs on the EEG and on the behavior of mice was also studied. EtOH increased the EEG frequency in comparison to the control group. The effect of the simultaneous administration of both drugs was not

Role of alpha-amylase/alpha-glycosidase in pancreatic carcinogenesis: current status and future perspectives. The human pancreatic beta cell can produce and secrete only a few types of insulin, whereas those of other mammals produce and secrete more different types of insulin. This may be due to the divergent function of the secretory/storage machinery, namely, its need for a limited number of substrates for specific enzymes. The ability to specifically synthesize and secrete a limited number of types of insulin may be important for the environmental control of blood glucose levels during the production of insulin by the beta cell. Intra- and extracellular metabolism of oligosaccharides by alpha-amylase and alpha-glycosidase represent the first biochemical events in insulin synthesis. We examined whether the enzymatic activity of alpha-amylase and alpha-glycosidase is associated with pancreatic carcinogenesis in rats treated with 4-dimethylaminoazobenzene (DAB). In the first group of DAB-treated rats, the enzymatic activity was reduced at 12 weeks, and in the third group, the activity was depressed for a longer period (16 weeks). These animals showed a high incidence of induced pancreatic tumors. In the second group, rats showed an enzymatic activity even at the start of the experiment, with the exception of alpha-glucosidase activity. These animals showed a low incidence of pancreatic tumors. The third group of animals was untreated throughout the experiment, and none of them developed pancreatic tumors. In the absence of insulin, glycosylation of substances is altered and neoplastic transformation of the epithelium of the pancreas can be induced by changes in cell-surface structures induced by glycosylation. alpha-Amylase is required for the activity of alpha-glycosidase. We compared the changes in the enzymatic activity of alpha-amylase/alpha-glycosidase in the context of pancreatic carcinogenesis in rats treated with DAB with those found in human pancreatic carcinoma. During

carcinogenesis, the activity of the alpha-amylase/alpha-glycosidase enzyme system was reduced. Both AMP and glucose levels showed similar reductions in the rats treated with DAB. We suggest that, in terms of pancreatic carcinogenesis in rats treated with DAB, the activity of alpha-amylase/alpha-glycos
