Pseudololactia Pseudololactia is a genus of moths of the family Noctuidae first described by Thomas Bainbrigge Fletcher in 1910. Description The Palaearctic species of the genus are most obvious for the long, whitish fringe over the inner margin of the tegula. The species generally differs from Pseudololactia blanchardiella by the smaller male size and the lack of vitta on the forewing upperside. The species of subgenus Pseudolactia Blanchard. (P. adustella and P. nebulosa) have a larger size and the central area of the forewing upperside is slightly darker than the subterminal area. The genus was formerly a synonym of Pseudolactia. Species Pseudololactia fergusonii (Tams, 1935) Pseudololactia blanchardiella (Fröhlich, 1899) Pseudololactia cooki Hering, 1945 Pseudololactia holotaenia (Barnes & McDunnough, 1913) Pseudololactia incerta (Barnes & McDunnough, 1912) Pseudololactia serilis (Hampson, 1909) References Category:Lamprosematinae, even while I'm cursing my way around the same track week after week. It really is a high pressure sport. I've driven for him and I don't know what it feels like, but I'm sure I'd love it. Yes, I'm scared to death of it, but I do love it. And having a tattoo of your name under your arm would be cool, too, wouldn't it? You're on the professional roller derby circuit and, if you're not already doing it, you're going to get tired of trying to fight for your team. (I'd be pretty happy with a blue one 50b96ab0b6
